

Vithushan Jeyasothy

Associate Technical Lead

Colombo, Sri Lanka • vithushjeytharma@gmail.com • +94 768-543-185

Profile Summary

- Associate Technical Lead with a wealth of experience, delivering complex solutions including cross-platform mobile applications and large-scale web platforms within fast-paced environments.
- Extensive technical skill set, with mastery in **JavaScript**, **TypeScript**, **Java** and **Python**, proficient in **React**, **Next.js**, **React Native** and **Node.js**, and solid grasp of database management (**MongoDB**, **MySQL**), with a focus on building performant, scalable and secure solutions.
- Impactful contributions during each phase of the **Software Development Life Cycle**, including requirements analysis, architecture design, implementation, testing, deployment and maintenance.
- Engaged collaborator with strong interpersonal skills and well versed in **Agile** methodologies, able to align **cross-functional stakeholders** with conflicting priorities to drive progress under aggressive time constraints.

Technical Skills

Programming Languages: JavaScript ES6+, TypeScript, Java, Python

Frontend Technologies: HTML5, CSS3, React, Next.js, React Native, Svelte, Astro

Backend Technologies: Express, Spring Boot, Flask

Databases: MySQL, MongoDB, Firebase Firestore, AWS S3

Cloud Services: AWS Lambda, AWS Amplify, NGINX

Development Tools: Elasticsearch, Redux, MobX, MobX-State-Tree, React Query, RevenueCat, Figma, Git

Machine Learning: Convolutional Neural Network, Transfer Learning, Tensorflow

Design and Architecture: RESTful APIs, WebSockets, Web workers, JWT, OAuth, ServerLess Functions, GoF Design Patterns

Education

Sri Lanka Institute of Information Technology (SLIIT)

Malabe, Sri Lanka

Bachelor of Science (Hons) in Information Technology

Jun. 2016 - Jan. 2021

- Developed and integrated a **plant disease detection system** using **Deep Learning**, training **ResNet50** and **Inception-v3** models and converting them into **TensorFlow Lite** for use in a **Flutter** mobile app, leading a **4-member** team.

Work Experience

Creative Software

Colombo, Sri Lanka

Associate Technical Lead

Mar. 2025 - Present

- Drafted and documented front-end architectural designs and presented them to the Technical Design Authority and Technical Design Board, including Principal Software Engineers, Tech Leads, Software Architects, and Team Managers, to provide technical solutions that addressed **technical requirements**.
- Cultivated a **collaborative environment** within the team by mentoring Junior Engineers through active **code reviews** and pair programming, facilitating knowledge-sharing and improving the quality of output.
- Developed a styled shared component library as an npm package following Atomic Design methodology and SOLID principles, and utilized **StoryBook** to document and visualize components, increasing team efficiency by boosting reusability and reducing code redundancy.

- Instituted standard **coding practices** that significantly boosted code readability, ensured its maintainability, and boosted team efficiency by leveraging industry-established guidelines and collaboration tools in the process.
- Collaborated within a cross-functional team including **Software Architect, Tech Lead, Quality Assurance Engineer, User Experience (UX) Engineer, Product Manager** and **Business Analyst**, employing **Agile** practices, including daily stand-up meetings and weekly sprints, to effectively deliver software under tight deadlines.

Senior Software Engineer

Mar. 2023 - Mar. 2025

- Optimized the web application's load time by applying lazy loading, browser caching, virtualizing large lists, rendering strategies, code splitting, memoization, and leveraging **Vite**, **Web Workers**, and **React Query**, achieving a page load time of under **10 ms**.
- Initiated a thorough revamp of the **Explori Web Application**, using **React** for the front-end, integrating state management with **MobX**, employing **Scss** for advanced styling solutions while developing forms, tables, data filtration mechanisms, and custom charts with **Apache ECharts**, all contributing to an improved user experience.
- Implemented the Strategy Pattern with **React Hook Form** to increase validation flexibility, reduce code duplication, and enhance code reusability and scalability in a **React** application, streamlining dynamic styling through the modular stylesheets.
- Crafted and implemented a secure user authentication system using the **Microsoft Identity Platform**, employing **OAuth 2.0** Authorization Code Flow and **JWT** for effective token-based authentication to safeguard user data privacy.
- Evaluated solutions by deploying unit tests, integration tests, and end-to-end tests using frameworks such as **Jest**, **Vitest**, **React Testing Library**, and **Cypress**, achieving a code coverage of **80%**.
- Deployed using **Docker** and **Git** hooks, and gained familiarity with **Jenkins**, achieving a more efficient deployment process.
- Maintained and enhanced the software by implementing periodic updates and optimizations, utilizing **Git** for source code management and **Prometheus** for real-time performance monitoring, ensuring continuous system efficiency.

Flatline Agency

Amsterdam, Netherlands

Software Engineer

Aug. 2020 - Feb. 2023

- Led a mobile development team of **5** to create cross-platform applications, completing successful Proof of Concepts and played a pivotal role in the technical effort by leading development teams and enhancing application performance across web and mobile platforms, by improving user experience, and optimizing application efficiencies.
- Collaborated with **UI/UX teams** and cross-functional teams, employing **Microsoft Fluent Design System**, to design and develop web applications and e-commerce products for the Netherlands Government, enhancing user engagement and functionality.
- Refined and sustained the job portal web application by integrating **React** with advanced practices such as custom hooks, lazy loading images, and memoizing components; combined with Server-Side Rendering using **Next.js** and employing component composition, modularization, and code smells removal, which led to reducing the load time from **12** seconds to **3** seconds.
- Transitioned **2,000** active users to the “**365 Meditations**” mobile app, developed using **React Native**, and optimized user engagement by adhering to Material Design and Human Interface Guidelines, while implementing responsive design, intuitive navigation, accessibility, and **TypeScript** to ensure type safety and modular coding, thereby achieving cross-platform compatibility on **Android** and **iOS**.
- Developed cutting-edge features such as notifications, chat, concurrent meditation, and in-app subscriptions using **MobX-State-Tree** and **Emotion** with **Moti**, improving immutable data structures, change detection, debugging, module reloading, and refining tweening algorithms and hardware acceleration to ensure a fluid user experience.
- Implemented **Sentry** and **Firebase** to optimize app performance and monitor user engagement analytics by integrating error tracking, performance monitoring, real-time database, and user authentication, while **RevenueCat** managed subscription lifecycle and payment processing, boosting user retention rates.

Trabeya

Colombo, Sri Lanka

Software Engineer Trainee

Sep. 2018 - Mar. 2019

- Developed an **Excel** sheet reader to streamline the bot maintenance team's manual work for the Virtual Concierge project and participated in **Scrum** and **Agile** ceremonies, enhancing team productivity, ensuring timely project delivery, and improving overall management.
- Build the **Virtual Concierge Dashboard** application using **Java** and **SpringBoot**, integrating dependency injection and microservices architecture alongside **Python** and **MongoDB**, streamlining data processing and user experience with indexing and replication.
- Conducted a document reader that searches both text and textual images within PDF files using the Ingest Attachment Plugin of **Elasticsearch**, integrating full-text search capabilities and data indexing to improve the system's information retrieval efficiency by reducing processing time.
- Resolved critical issues in the application during the User Acceptance Testing period by managing **JIRA** tickets and providing on-call support, which improved system stability by reducing downtime.
